JOHN R. TEERINK
Director
Department of Water Resources

An aerial view of Castaic Dam and Reservoir, a terminal reservoir (capacity 350,000 acre-feet) of the State Water Project located in Los Angeles County about 40 miles north of the City of Los Angeles. The dam was completed in late 1973 and at the time of the photograph, December 11, 1973, the reservoir was filling. Castaic Lagoon (capacity 2,660 acre-feet) is in the foreground. (DWR photo No. 4411-72)

FOREWORD

Division 3 of the California Water Code places the safety of nonfederal dams and reservoirs under the jurisdiction of the California Department of Water Resources. This jurisdiction pertains to dams 25 or more feet high which impound more than 15 acre-feet of water and dams more than 6 feet high which impound 50 or more acre-feet. It applies to appurtenances and entire reservoir basins and includes off-stream storage facilities.

Before August 14, 1929, the State of California exercised supervision to a very limited degree over less than half the dams in the State. In addition, several federal offices exercised supervision over a few other dams, but a large number still remained which had no form of supervision, either state or federal.

In 1928, the sudden failure of St. Francis Dam in Southern California resulted in a major disaster. Because of this failure and because of the potential hazard to the general populace from the many water storage projects in California, the Legislature in 1929 enacted a law providing supervision of dams in the State. Following the failure in 1963 of Baldwin Hills Dam in Southern California, the Water Code was amended by the Legislature to include within state jurisdiction both new and existing offstream storage facilities and entire reservoir basins. This amendment, which took effect on September 17, 1965, provides for both the approval of plans and specifications and construction supervision of all new off-stream facilities and the examination and approval of repair of offstream dams and reservoirs completed before the effective date.

Following the San Fernando earthquake of February 9, 1971, the Department considered extensively the subject of dam safety because of earthquake effects and postulated criteria on acceptable risks. The San Fernando earthquake, together with advances in the state-of-the-art in dynamic analysis, has resulted in reconsiderations of the seismic safety of all dams in California.

Provisions of the code are administered by the Department's Division of Safety of Dams. This division reviews plans and specifications for constructing a new dam or for repairing, altering, or removing an existing dam and must grant approval in writing before the owner can proceed. Professional engineers from the division evaluate the safety of each project and investigate proposed sites and check available construction materials.

During construction, they identify conditions disclosed during site development which may require design changes; they check for compliance with approved plans and specifications; and they approve all

foundations before they are covered. During operation, they periodically examine dams to detect unusual performance which, if not remedied, could lead to hazardous conditions. They purposely avoid codes of standard design, construction or surveillance requirements because such codes cannot apply uniformly to widely varying conditions at different damsites.

Authorization to store water is given by a certificate of approval issued by the Department of Water Resources. These certificates may contain restrictive conditions and may be amended or revoked.

On January 1, 1974, there were 1,091 dams and reservoirs subject to state jurisdiction. The estimated first costs of the dams exceeded one billion dollars, and combined storage capacity of the reservoirs exceeded 20 million acre-feet. Bulletins of the No. 17 series, "Dams Within Jurisdiction of the State of California", supply the name, location, type, size, age, and ownership of such dams, the maximum water storage elevation, and their area of tributary drainage.

An appendix lists dams in California owned or operated by federal agencies. The cooperation of federal agencies in supplying data related to their dams is much appreciated.

Data relating to dams under state jurisdiction were obtained from the applications and plans submitted by owners in compliance with the California Water Code. Field surveys and supplementary data from owners provided additional data.

The Department solicits from bulletin users their suggestions for additions or corrections. These should be sent to:

Division of Safety of Dams
Department of Water Resources
P. O. Box 388
Sacramento, CA 95802

Reprints of "Statutes and Regulations Pertaining to Supervision of Dams and Reservoirs" will be sent without charge to those who express an interest.

* Includes dams for which volume is not known.

EXPLANATION OF TABULATED DATA

Column headings introduce the following data:

NAME OF DAM -- as assigned by owner on original application, or as changed by owner in subsequent written correspondence of the Department of Water Resources.

DAM NUMBER -- as assigned by the Department of Water Resources.

COUNTY -- in which dam is located. Dams located in more than one county are listed under the county of alphabetical precedence.

STREAM -- on which dam is located as named by the owner on original application or as revised to conform with United States Geological Survey topographic maps.

LOCATION -- section, township, range, and base line and/or meridian, as used in "The System of Rectangular Surveys".

TYPE -- of main dam only.

STORAGE CAPACITY -- in acre-feet at the maximum water storage elevation, including dead storage.

DRAINAGE AREA -- in square miles. For onstream facilities, drainage areas less than 0.1 square mile are listed as 0.1 square mile.

RESERVOIR AREA -- in acres either at spillway crest elevation or, if headwater controls are used, at maximum water storage elevation.

ELEVATION OF CREST -- to nearest foot (U.S.G.S. datum, when available; otherwise approximate U.S.G.S. datum).

CREST LENGTH -- of main dam (excluding auxiliary dams) in feet.

HEIGHT -- in feet from dam crest elevation (excluding any parapet) to the lowest elevation of the outside limit of the dam.

PERMANENT SPILLWAY -- vertical distance in feet from dam crest to permanent spillway crest.

MAXIMUM OPERATING LEVEL -- where spillway crest controls are used, vertical distance in feet from dam crest to the maximum possible water storage elevation (top of gates or flashboards, etc.).

CREST THICKNESS -- in feet normal to the axis at the narrowest point.

DAM VOLUME -- in cubic yards of the principal material used for both main and auxiliary dams.

YEAR COMPLETED -- date original construction completed.
